

Esther S. Weon FULL-STACK ENGINEER & DATA SCIENTIST

esther.s.weon@gmail.com | 415.910.8561 | github.com/esthersweon | linkedin.com/in/esther-weon

Full-stack software engineer of 4 years turned data scientist, looking for challenging & worthwhile machine-learning problems. Lover of tinkering in full-stack JavaScript, predicting the future with machine learning, & practicing Muay Thai.

SKILLS

DATA ANALYSIS	Python for data manipulation (pandas, numpy) & visualization (matplotlib, seaborn), statistical modeling (scipy, sklearn), & deep learning (Keras, TensorFlow); SQL; experiment design (A/B test)
MACHINE LEARNING ENGINEERING	Supervised & unsupervised learning; deep learning with neural networks; NLP; Big Data
TECH TRAINING	Full-stack engineer – HTML, CSS, React / React Native, Redux, Angular, D3.js, Node, Ruby, Rails, Python, MySQL, PostgreSQL, MongoDB
	Technical instructor & curriculum developer, tech conference & web dev meet-up speaker

PROJECTS

Supervised Learning Data Scientist, Employee Mental Health in US bit.ly/supervised_notebook; bit.ly/supervised_slides
– Python, numpy, pandas, matplotlib, sklearn, imblearn

Predicting employees who seek mental health treatment at US companies using supervised learning techniques such as Logistic Regression (LASSO), Naive Bayes Classifier, Gradient Boosting Classifier, & Support Vector Classifier models.

Unsupervised Learning Data Scientist, Categorizing Mobile Applications bit.ly/unsupervised_notebook
– Python, numpy, pandas, matplotlib, sklearn, langdetect

Finding yet-undetermined categories within a large dataset of mobile applications using unsupervised learning techniques such as K-Means, Mini-Batch K-Means, and Mean-Shift clustering models.

Deep Learning Data Scientist, Recognizing Produce Images bit.ly/ds_deep_learning
– Python, numpy, pandas, matplotlib, sklearn, skimage, Keras, TensorFlow

Using neural networks (implemented in Keras & TensorFlow) to correctly categorize images of grocery produce

Full-Stack JavaScript Engineer, Jeopardy bit.ly/jeopardy_backend / bit.ly/jeopardy_frontend
– Using Node.js, React.js, mongoDB

Creating a full-stack JavaScript web application inspired by the popular trivia game Jeopardy

EXPERIENCE

Full-Stack Software Engineer, Presence **October 2014 - May 2017, March 2018 - June 2018**

- Consulted as full-stack software engineer & technical advisor on 15+ web & mobile projects for Toyota, Logitech, National Geographic, Ubisoft, & other tech clients
- Specialized in full-stack JavaScript, but worked in diverse tech stacks (Python / Django, Ruby on Rails, PHP, etc.)
- Followed Agile practices to lead sprint meetings, track priorities, manage task delegation, & plan feature roadmaps
- Collaborated with product managers, designers, data scientists, & fellow engineers to deliver robust applications

Full-Stack Web Development Instructor, General Assembly **September 2017 - May 2018**

- Developed curriculum for 3 cohorts of Web Development Immersive students in full-stack web development (Node, Ruby on Rails, Angular, React, MongoDB, PostgreSQL)
- Led lectures on engineering concepts, workflow processes, & technical job hunt preparation
- Updated & managed updates & expansion to the Web Development Immersive curriculum
- Provided technical & qualitative feedback on student projects & portfolio

EDUCATION

Data Science Program, Focus on Machine Learning & Deep Learning
Full-Stack Software Engineering
Full 4-Year Merit-Based Scholarship Recipient for Bachelor's Degree
